Figure 1. Precipitation Peaks at NCOS Overlaid on Monthly Average Salinity

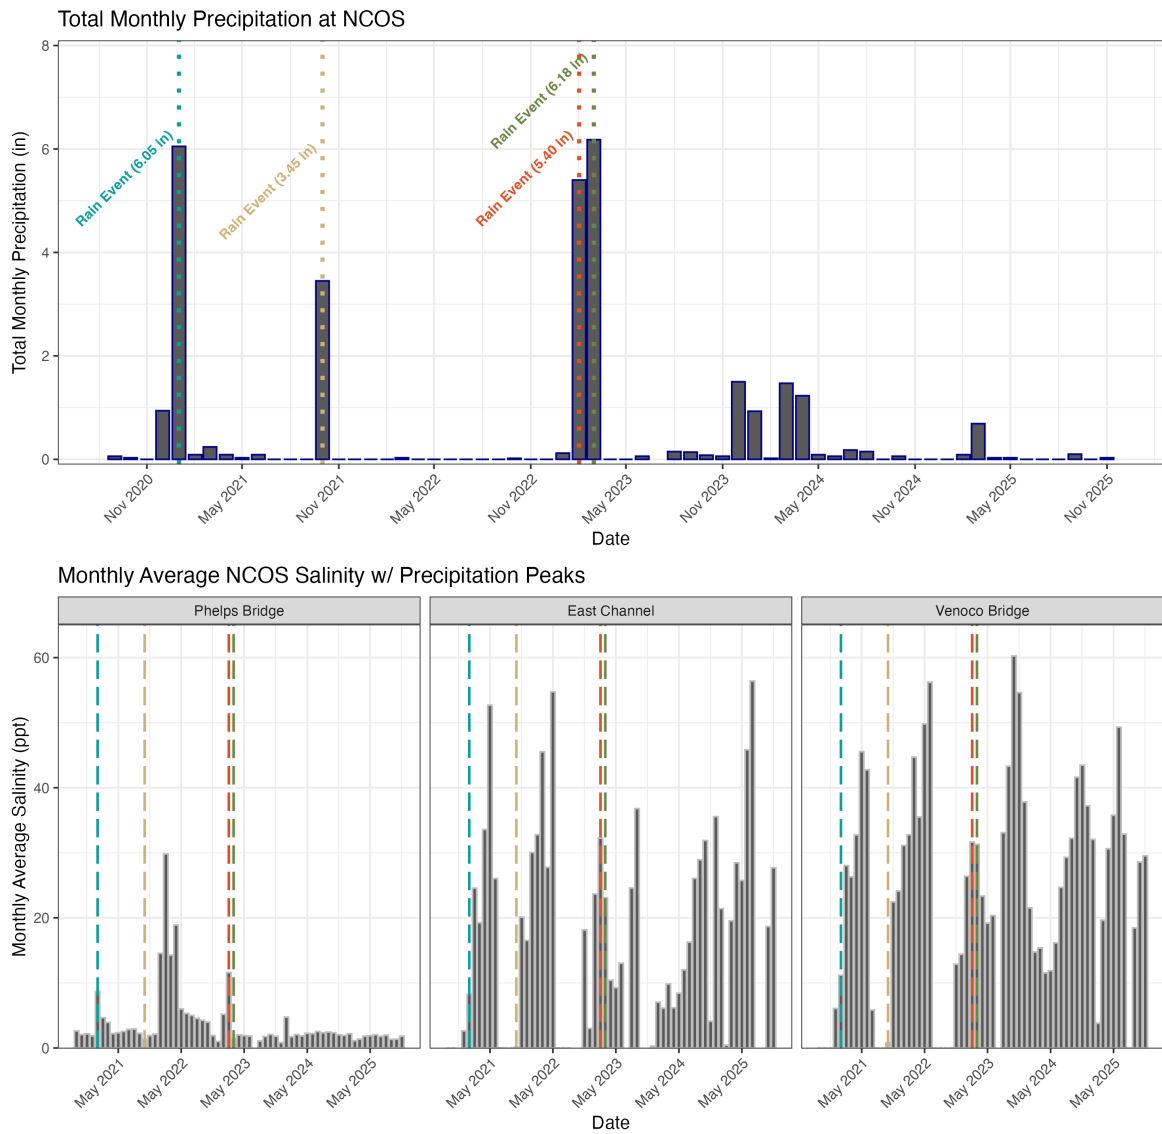

Figure 1. On the top, the total monthly precipitation is graphed by columns with the top 4 precipitation peaks depicted by colored dotted lines and labels. On the bottom, these precipitation

peaks are overlaid onto the monthly average salinity for each of the three sites of interest (Phelps Bridge, East Channel, and Venoco Bridge).

Figure 2. How Salinity Relates to Water Surface Elevation (Venoco Bridge)

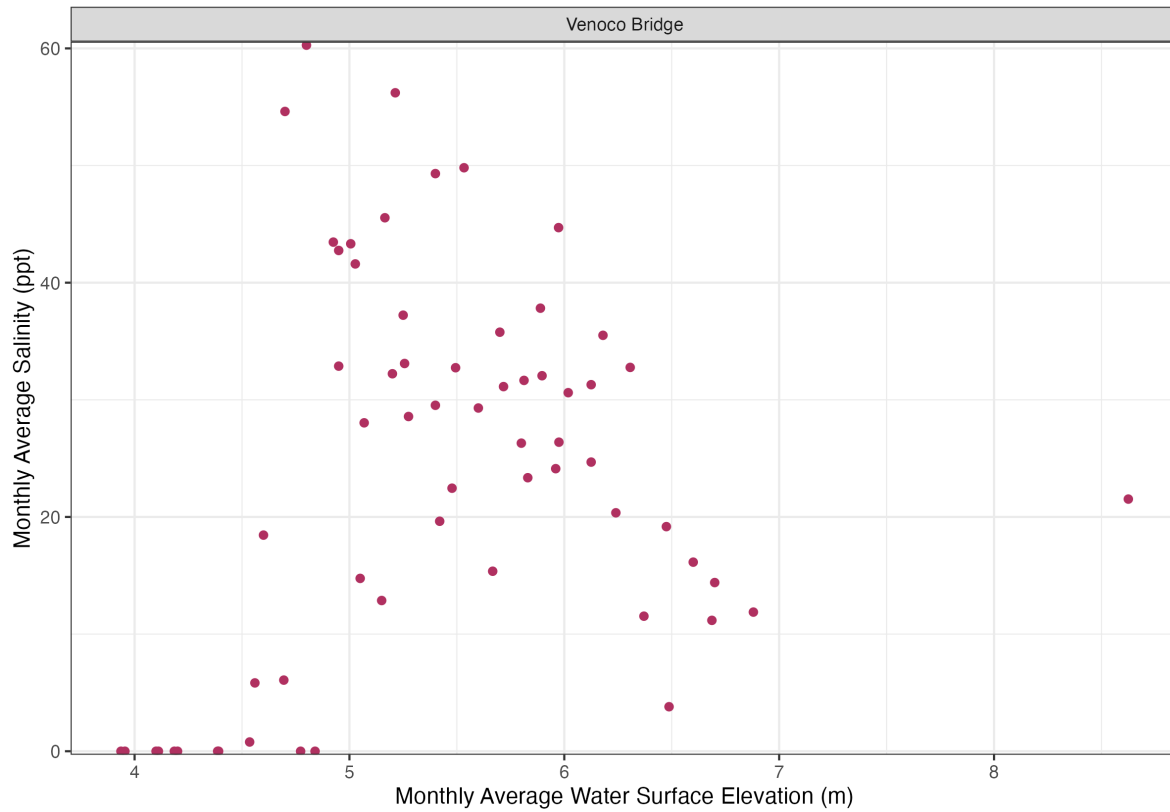

Figure 2. This figure displays the relationship between monthly average water surface elevation and monthly average salinity as maroon points.

Figure 3. How Temperature Relates to Salinity Across NCOS Sites

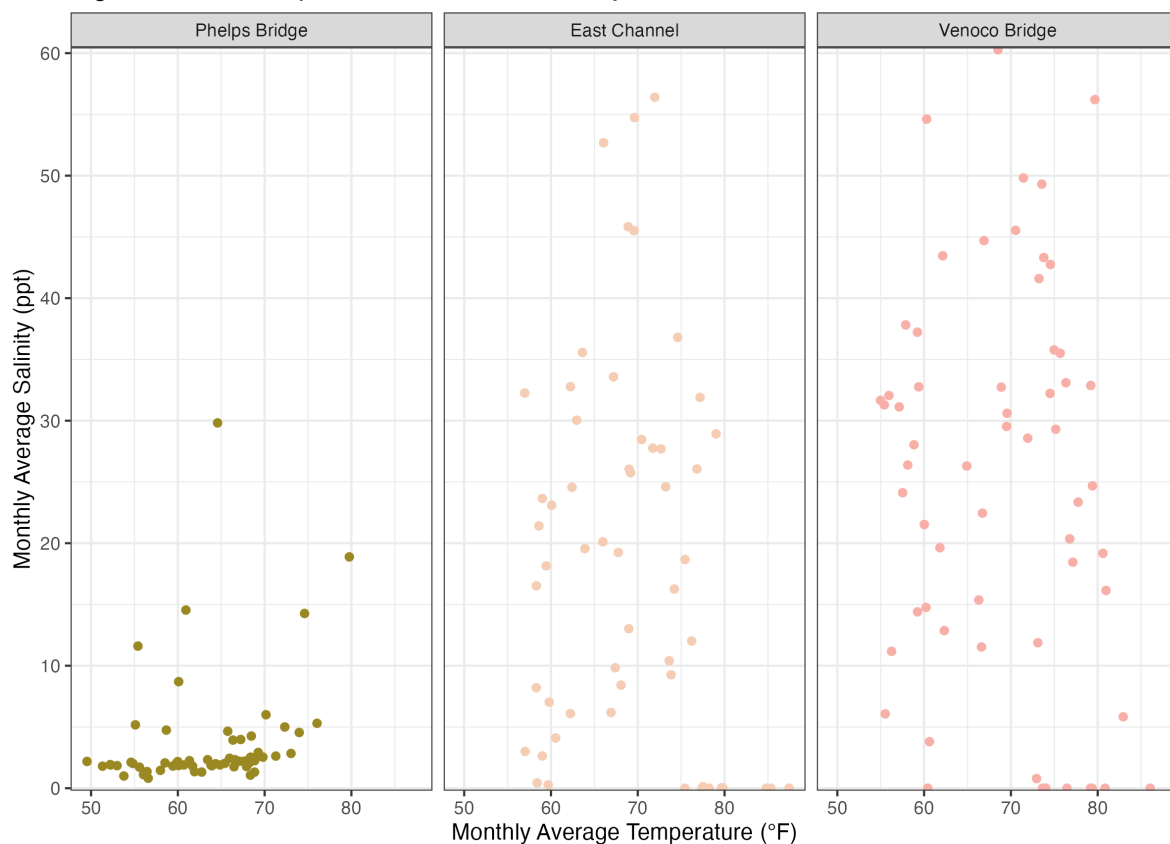

Figure 3. This figure displays the relationship between the monthly average temperature in degrees Fahrenheit and monthly average salinity for each of the 3 sites of interest (Phelps Bridge, East Channel, Venoco Bridge).
